

CREATING A BRIGHTER TOMORROW

We are on a mission to reduce our environmental impact. The U-Eco™ line is designed to be kinder to the planet through the minimization of plastic and incorporation of natural elements by repurposing renewable materials like wheat straw.

WHAT IS WHEAT STRAW?

Wheat straw is the dry stalk portion of the wheat plant that is left over after the granules towards the top are harvested to be ground into flour.

Historically, wheat straw has often been considered agricultural waste. As a low-cost solution, many farmers would burn their wheat straw byproduct, risking harm to our atmosphere. Others would repurpose it as filler in animal feed or bedding.

Today, we've found a zero-waste solution in which wheat straw is broken down to the abundant all-natural polymers within, responsible for the wheat plant's rigid upright structure. When combined with sugar, the result is "wheat straw plastic" or "bioplastic".

OFFICE TOOLS

FILING SOLUTIONS

THE U-ECO™ COLLECTION

Products in the U-Eco™ Collection are made of a blend of wheat straw, polypropylene, and/or ABS pellets, creating hybrid alternatives to traditional plastic. This means affordable high-quality office products that are kinder to the planet, require less energy to make and recycle, and generate new profits for agricultural farmers.

Each item is available in nature-inspired colorways, uniquely speckled due to their 15 to 50% wheat straw composition, and packaged in 100% recycled materials.
